DEPARTMENT OF DEFENSE

Washington, D. C. 20301

Abbreviations for use on Drawings, and in Specifications, Standards and Technical Documents.

MIL-STD-12D

1. This Military Standard is approved for use by all Departments and Agencies of the Department of Defense.
2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, US Army Armament Research and Development Command, ATTN: DRDAR-TST-S, Dover, New Jersey 07801, by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

MILITARY STANDARD.

ABBREVIATIONS FOR USE ON DRAWINGS, AND IN
SPECIFICATIONS, STANDARDS AND TECHNICAL DOCUMENTS

1. SCOPE

1.1 Scope. The terms and abbreviations in this standard are limited to those commonly used on drawings, and in specifications, standards, and technical documents.

1.2 Application. This standard provides a list of abbreviations authorized for use on drawings, and in specifications, standards, and other technical documents.

1.2.1 Short words. Abbreviations of words having five or fewer letters are not included except those established by longstanding practice.

1.2.2 Field of use. Where an abbreviation is intended primarily for a particular field of application, that field is indicated in parentheses following the term, eg, fast operate (relay).

1.2.3 Combining form. Where two abbreviations are listed for the same word, the first applies to the word used alone, while the one designated (comb form) is to be used only in combination with abbreviations of other words to form an abbreviation for a word combination.

2. REFERENCED DOCUMENTS

2.1 General. The issue of the following documents in effect on the date of invitation for bids form a part of this standard to the extent specified herein.

2.2 Standards

ANSI Y10.3-1968	Quantities Used in Mechanics of Solids, Letter Symbols for
ANSI Y10.5-1968	Quantities Used in Electrical Science and Electrical Engineering, Letter Symbols for
ANSI Y10.20-1975 including ANSI Y10.20a 1975	Mathematical Signs and Symbols for use in Physical Sciences and Technology
ANSI/IEEE STD 260-1978	Letter Symbols for SI Units, and Certain Other Units of Measurement
ASTM E380-1979	Standard for Metric Practice

2.3 Other publications.

Webster's Third New International Dictionary, Unabridged.

Copies of listed Industry Association Standards are available to Military activities through the DOD Single Stock Point, US Naval Supply Depot (NSD 103), 5801 Tabor Avenue, Philadelphia, PA 19120. Nonmilitary activities may obtain copies from:

- (ANSI) American National Standards Institute
1430 Broadway, New York, NY 10018
- (ASTM) American Society for Testing and Materials
1916 Race Street, Philadelphia, PA 19103
- (IEEE) The Institute of Electrical and Electronics Engineers, Inc.
345 E. 47th Street, New York, NY 10017

3. DEFINITIONS

3.1 Abbreviations. An abbreviation is a shortened form or abridgment of a word, expression or phase used to conserve space and time.

4. GENERAL REQUIREMENTS

4.1 Clarity. Abbreviations shall be used only when their meanings are unquestionably clear to the intended reader. WHEN IN DOUBT, SPELL IT OUT. Abbreviations that are not in common use and are to be used frequently in a document or where there is doubt that the reader will understand their meanings, should be clarified when first used: by spelling out the word or complete phrase, followed by the abbreviation in parentheses.

4.2 Word combinations. Portions of an abbreviation for a word combination shall not be separated for use singly. Single abbreviations may be combined when necessary if there is no abbreviation listed for the combination.

4.3 Syntax. Unless otherwise indicated herein, the same abbreviation shall be used for all tenses, the possessive case, participle endings, the singular or plural, and the noun and modifying forms of a term.

4.4 Capitalization. Abbreviations included in the left-hand column provide the form for use on drawings and documents produced in upper-case characters. The abbreviations in the right-hand column provide the form required for documents produced in lower-case characters; however, these abbreviations may be capitalized when required for emphasis. Abbreviations that are capitalized in the right-hand column are a continuation of prior usage and in general are abbreviations for major systems or are recognized as having significant application when used in text. Abbreviations are not listed in the right-hand column for many short words. If space limitations make it necessary to abbreviate such terms, the abbreviation which appears in the left-hand column shall be used except for the substitution of lower-case letters.

4.5 Punctuation.

4.5.1 Punctuation marks which do not appear in this standard shall not be used with the abbreviation of a technical term; however, an abbreviation spelling a whole word should include a period if the abbreviation is not obvious to its intended reader. An exception is made for abbreviations used in computer applications wherein a hyphen (-) may be substituted for a blank space which appears in an abbreviation, eg. 'seq-chk' in lieu of 'seq chk'.

4.5.2 Hyphens should be used with adjectival forms of abbreviations and symbols, eg, a 35-mm film.

4.6 Revised abbreviations. Abbreviations in this standard reflect recent changes in the state-of-the-art.

4.7 Symbols. The distinction between abbreviations and symbols is tricky, because it depends upon context, rather than form. For example, "the current is 5 amps" and "the pressure is 3 psi" are allowable uses of abbreviations, whereas writing "I = 5 amp" and "p = 3 psi" are incorrect. Whenever a mathematical operation or sign is involved, such as the equality sign (=) or the division sign (/), abbreviations cannot be used. Mathematical operations are performed only upon symbols; for example, $I = 5 A$ and $p = 3 \text{ lbf/in}^2$. Symbols that appear in the following documents are preferred (for example, "the current is 5 A") in lieu of abbreviations that appear in this standard and shall be used in lieu of abbreviations for terms that do not appear herein:

- a. Chemical Symbols: Webster's Unabridged Dictionary (International Tables of Chemical Elements)
- b. Mathematical Symbols: ANSI Y10.20 and Y10.20a
- c. Quantity Symbols: ANSI Y10.3 and ANSI Y10.5
- d. Unit Symbols: ANSI/IEEE STD 260
- e. Metric Practices: ASTM E380

4.8 Abbreviations used in existing technical documents. Unless otherwise specified, any changes or revisions to an existing drawing, specification, standard, or technical document prepared under a previous edition of this standard, may use the latest abbreviations, although the superseded abbreviations may appear elsewhere in the document.

5. DETAILED REQUIREMENTS

THIS PAGE LEFT BLANK INTENTIONALLY

5.1 List of terms and their abbreviations.

TERM	ABBREVIATION	TERM	ABBREVIATION
a programming language	APL	action time	A/T
abandon ship	ABDNSHP	activate	ACTV

USFU	usfu	unglazed structural facing units	VCE	vce	vertical centrifugal
USG	USG	United States Gage	VCG	vcg	vertical location of the center of gravity
USM	usm	underwater to surface missile	VCL	vcl	vertical center line
USS	uss	United States Standard	VCM	vcm	vibrating coil magnetometer
USTZD	ustzd	unsensitized	VCO	vco	voltage controlled oscillator
USUB	usub	unglazed structural unit base	VCOP	vcop	variable control oil pressure
USW	USW	undersea warfare	VCSR	vcsr	voltage controlled shift register
UT	ut	universal time	VCT	vct	vitrified clay tile
UTC	UTC	coordinated universal time	VCT	vct	voltage control transfer
UTC	utc	unit time coding	VCXO	vexo	voltage controlled crystal oscillator
UTEELRAD	uteelrad	utilization of enemy electromagnetic radiation	VD	vd	vandyke
UTIL	util	utility	VD	vd	vault door
UTIL	util	utilization	VD	vd	void
UTN	utn	utensil	VD	vd	voltage drop
UTRTO	utrt	untreated	VDA	vda	video distribution amplifier
UTS	uts	ultimate tensile strength	VDC	vdc	direct current volts
UTS	UTS	universal time standards	VOCT	vdc	volt direct current
UUM	uum	underwater to underwater missile	VDCW	vdc	direct current test volts
UUT	uut	unit under test			direct current working volts
UV	uv	ultraviolet			
UVASER	uvaser	ultraviolet amplification by stimulated emission of radiation			
UVD	uvd	undervoltage device			
VFLT	uvflt	ultraviolet floodlight			
JW	uw	ultrasonic wave			

ABBREVIATION	TERM	ABBREVIATION	TERM
VOEL	vdel	variable delivery	vector impedance locus plotter
VOET	vdet	voltage detector	vacuum induction
VOFG	vdfg	variable diode function generator	melt-vacuum arc remelt
VOI	vdi	vertical display indicator	vertical impulse
VOL	vdl	ventilating deadlight	video integration
VDS	vds	variable depth sonar	violet
VDT	vdt	video display terminal	value in performance
VE	ve	value engineering	variable information processing
VE	ve	ventilating equipment	visual identification point
VEB	veb	variable elevation beam	visual
VECO	veco	vernier engine cutoff	viscosity
VEDAR	vedar	visible energy detection and ranging	visual identification
VEG	veg	vegetable	viscometer
VEH	veh	vehicle	vitreous
VEI	vel	value engineered indicator	namely
VEL	vel	vellum	vertical ladder
VEL	vel	velocity	very low altitude
VENT	vent	ventilate	visual low angle drogue delivery
VENT	vent	ventilator	vital load center
VERB	verb	verbatim	variable length cavity resonance
VERDAN	verdan	versatile differential analyzer	visual laydown delivery
VERIF	verif	verification	very low frequency
VERLORT	verlort	very long range tracking	variable low frequency standard
VERN	vern	vernier	volumetric
VERNITRAC	vernitrac	vernier tracking by automatic correlation	vertical landing point
VERS	vers	versed sine	very long range
VERST	verst	versatile	very low range
VERT	vert	vertical	very large-scale integration
VEST	vest	vestibule	volume
VEV	vev	voice excited vocoder	velocity modulation
VF	vf	variable frequency	voltmeter
VF	vf	vector field	visual meteorological conditions
VF	vf	voice frequency	visual meteorological
VFA	vfa	variable gain amplifier	vaneaxial
VFC	vfc	voice frequency carrier	voice
VFCTT	vfctt	voice frequency carrier teletype	voice band compression
VFL PT	vfl pt	variable floating point	voice order circuit
VFO	vfo	variable frequency oscillator	voice communications
VFR	vfr	visual flight rules	voice operated device
VFREQ CLK	vfreq clk	variable frequency clock	anti-sing
VFTLG	vftlg	voice frequency telegraph	voice operated device for automatic transmission
VGPI	vgpi	visual glide path indicator	voice operated gain adjusting device
VGS	vgs	visual glide slope	volume
VGSI	vgsi	visual glide slope indicator	voice operated loss control and suppressor
VH	vh	vent hole	volt-ohm milliammeter
VH	vh	Vickers hardness	very high frequency
VHF	vhf	very high frequency	omnidirectional and radio range
VHFDF	vhfdf	very-high frequency direction finding	VHF omnirange distance measuring equipment
VI	vi	video integrator	very-high frequency omnirange locator
VI	vi	viscosity index	voice operated transmitter keyer
VI	vi	volume indicator	vapor pressure
VIB	vib	vibrate	vent pipe
VIB	vib	vibration	vertical planning
VICI	vici	velocity indicating coherent integrator	vertical polarization
VID	vid	video	video prelaunch command amplifier
VIDAMP	vidamp	video amplifier	vibration per minute
VIDAR	vidar	velocity integration detection and ranging	vaporize
VIDF	vidf	video frequency	vibrator power unit
VIL	vil	village

XMTG	xmtg	transmitting		

International Interest. Certain provisions of this standard are the subject of international standardization agreement QSTAG 229. When revision or cancellation of this standard is proposed which will affect or violate the international agreement concerned, the preparing activity will take appropriate reconciliation action through international standardization channels, including departmental standardization offices if required.

Custodians:

Army - AR
Navy - SH
Air Force - 16

Preparing activity:

Army - AR
(Project DRPR-0216)

Review activities:

Army - AT, AV, CR, ME, MR,
Navy - AS, EC, YD

User activities

Navy - MC, OS
Air Force - 17
DSA - DH

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge (*DO NOT STAPLE*), and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
